Sounds like you should investigate the engine before making a decision about repair/replacement. I check m54's for pulled block threads by loosening and re-torquing the head bolts one at a time, if the block threads are damaged you won't be able to achieve torque spec on several or all of the bolts.

The BMW M54 is a straight-6 DOHC piston engine which replaced the M52 and was produced from 2000-2006. There was no "technical update" (TU) version of the M54 produced, therefore the engine specifications remained the same throughout its 7-year production. The M54 began to be phased out following the introduction of the BMW N52 in 2004.

Another vote for G.A.S. rebuild kit for M54... - We have three (3) M54 engines at home, and all 3 have G.A.S. rebuild kit installed. - As long as the vacuum diaphragm of the DISA is OK, then you can rebuild using G.A.S. kit. My recommendation: 1. At 100K, rebuild using G.A.S kit. 2. At 200K check the diaphragm, if bad, new Genuine BMW DISA.
