Phonak's Speech in Wind (SiW) feature within the Quest platform is designed to improve not only comfort, but also speech intelligibility in windy situations. This is a binaural signal processing algorithm based on the principle of binaural hearing. An example of a binaural hearing strategy would be the "better hearing" effect.

Evaluation of a Binaural Speech in Wind ... - Hearing Review

Further, the struggle to understand speech for persons with hearing loss is now exacerbated by the masks which are a necessity to help minimize the spread of the virus. These masks pose two obvious problems for patients with hearing loss: 1) the patient cannot gain any cues from lipreading, and 2) the voice of the healthcare provider is attenuated and distorted.

How Do Medical Masks Degrade Speech ... - Hearing Review

The aim of this review was to establish the hearing and speech benefits of cochlear implantation in children. The predictive effects of a number of factors including age at implantation, the presence of comorbidities, social determinants of health, and bilateral versus unilateral hearing are described. 2.
