### Theoretical Astrophysics Astrophysical Processes

Astrophysics is a science that employs the methods and principles of physics in the study of astronomical objects and phenomena. Among the subjects studied are the Sun, other stars, galaxies, extrasolar planets, the interstellar medium and the cosmic microwave background. Emissions from these objects are examined across all parts of the electromagnetic spectrum, and the properties examined ...

## **Theoretical Astrophysics by T. Padmanabhan**

The core questions for the theoretical astrophysics group are the hydrodynamics of compact objects (black holes, neutron stars, and white dwarfs) and their accretion disks at times of violent actions (collisions, flares, star formation). A typical role is to calculate the gravity waves from collisions for LIGO and LISA. The hydrodynamics is run using SuperMIKE, which is LSU's supercomputer.
